

Map of Europe showing sampling locations. The legend indicates four categories of sampling locations:

- nonapprovK (Red circle)
- truezerodetect (Blue circle)
- repl1pos (Green circle)
- repl2pos (Dark green circle)

Sampling locations are marked with colored circles and labeled with 'n' values, indicating the number of samples collected at each location. The map shows a high density of sampling locations in the British Isles and Scandinavia, with 'n' values ranging from 1 to 8. Other locations are marked with 'n=2' or 'n=4'.
